Whilst we do our utmost to reproduce sounds that are accurate and true-to-life, sometimes these sounds may not completely tally with the user's expectation. Due to the nature of the simulation, it is often not possible to reproduce a completely accurate soundscape for a variety of reasons such as limitations with our current technology and occasional inability to gain meaningful access to the locomotives being created. You should therefore regard the audio reproduction for our locomotives as authentic interpretations rather than perfect recreations.

Getting the Best Performance in Quick Drive

The Frankfurt High Speed route is a highly detailed environment and due to the sheer scale of the trackwork and scenery, you will need to adjust your in-game settings to get the best performance and stability whilst playing in Quick Drive. Please follow the instructions below to configure Train Simulator for Frankfurt High Speed:

1. Load Train Simulator and select the Settings menu from the main menu screen (it's in the upper-right of the screen)
2. When the Settings menu opens, click the Advanced button
3. Move the Scenery Quality slider to the left, the more you reduce this option, the better the performance and stability gains
4. Click the Save button to save your changes.

Train Simulator is now configured for Frankfurt High Speed Quick Drive.
