Troubleshooting:

If your game runs in super-fast motion:

Edit your graphics settings to force vertical sync in Pertinence, or globally force vertical sync.

If your game crashes:

Send an email to notmagicgames@gmail.com for help.

Be sure to explain exactly where your game crashed and paste any error messages you may have received. Please give all known specs for your PC.

Because there have been many bugs in the past related to localization, it would be helpful if you gave your current country as well.
