

About DinoPlanet:

DinoPlanet is an immersive virtual reality dinosaur documentary and zoo experience. The primary documentary mode will last about 20 minutes and is a guided tour through the Earth while it was a DinoPlanet.

Players are able to interact with the world by:

- Pressing on the joystick of the Oculus Quest to teleport
- Pointing the controller and pressing the grip button to pick up objects
 - A laser will point from the controller to the object when it's ready to be picked up
- Physically pressing console buttons with your hands.

In addition to the documentary mode and dozens of additional facts in freeplay mode, players are encouraged to investigate each of the enclosures for painting, fossils, and even dinosaur eggs to help restore the DinoPlanet museum to its former glory.

And having FUN!!!

Requirements:

DinoPlanet VR Requires VR Headset and a PC meeting the Oculus Quest 2 Min Recommended specs to run
